

Leaders in Zero Liquid Discharge

H₂O

Vacutouch Control System.
Optimized system availability, highly comfortable.

Surveys and workshops involving our most experienced customers defined user requirements for the day to day operation of vacuum distillation systems. This valuable information was an integral part during development of our innovative operating concept. This explains why our new Vacutouch control system is highly valued by our customers. It corresponds to what machine operators expect: Simplicity.

Optimized System Availability.

A simple and comfortable human machine interface.

An intuitive control system saves time and money. Thus we developed our Vacutouch control system to be easy and self-explaining to operate. It shows operation modes of the VACUDEST vacuum distillation system fast and comprehensible. For optimized system availability.

More time for essentials.

The innovative Vacutouch control system is operated right at the clearly structured touch screen monitor. Here you can see at once which preventive routine controls and maintenance activities are due. As extensive studies of the operations manual is not necessary any longer you can concentrate on more important tasks.

Know immediatly if something is wrong.

The alarm system will send you either an e-mail or a SMS error message, thus, in emergency, you can react quickly, no matter where you are.

Direct analysis for quick solutions.

Our e-service system allows cost effective and fast system diagnosis through the internet. Our experts can directly get access to your evaporation system for trouble shooting. In 8 out of 10 cases on site deployments are not necessary any more. Thus you reduce down times and increase system availability.

Optimized treatment system with low operation costs.

The 12-month data storage allows extensive analysis of the system operation. Process parameters can be optimized at anytime. For increased efficiency in your production.

Vacutouch

- Intuitive, interactive operation
- Process reliability
- Optimized system availability
- Reduced operating efforts

Efficient process optimization: The Vacutouch control system allows direct VACUDEST process data transfer to our technical customer support.

Via remote control your system parameters are optimized. This saves time, money and ensures optimized system availability.
